

weftron WEXP - braided protective sleeve products

are produced in a multitude of configurations and with a large variety of material such as PA6, PET, PPS, PEEK, PTFE, Aramide, Glass, Ceramics plus many more. Two varieties of braided sleeves are shown here for example.

One with a very tight surface coverage, for high level of mechanical protection, the other with a very high expansion capability to ease installation of the sleeve even over bulky components. Please contact us and we will offer the most suited solution **for your connection with special requirements**
